

Preface to  
The 3rd International Conference on Mechanical, System and Control Engineering  
(ICMSC 2019)

The 3rd International Conference on Mechanical, System and Control Engineering (ICMSC 2019) held in St. Petersburg on June 21-23, 2019. The subject of the conference is devoted to the mechanics of systems. According to its scientific purpose, mechanics can have many applications in science and technology. Therefore, a conference devoted to the study of mechanics can be attributed to conferences devoted to fundamental issues of science.

Traditionally, the conference reviewed reports on the engineering industry, production organization and the space industry. Russia has a well-developed industry and the choice of country for holding such a conference was not accidental.

The conference brought together participants from many countries. There were participants from Russia, China was widely represented, and there were representatives of European countries.

The following scientific sections were at the conference: Control Theory, System Modelling, Data analysis and simulations and etc.

In various scientific schools there are various scientific approaches to solving similar problems. The conference brings together representatives of various scientific schools together. The opportunity to exchange experiences for participants who are representatives of various scientific schools is the most important advantage of an international conference.

The work of the conference was interesting and fruitful. It will be continued further.

Conference General Chair  
Vsevolod V. Koryanov  
Bauman Moscow State Technical University, Russia
